

# Ice Maker Kit Installation Instructions

This kit contains hardware for connecting a General Ecology Drinking Water System with  $\frac{3}{8}$ " male compression fittings ( $\frac{9}{16}$ " -24 threads) to a refrigerator or other appliance having a  $\frac{1}{4}$ " male compression inlet ( $\frac{7}{16}$ " -24 threads). Read instructions completely before starting installation.

## Installation Steps

1. Turn off cold water supply line and relieve pressure.
2. Disconnect drinking water faucet supply hose from drinking water system.
3. Connect 36" hose to drinking water system outlet.
4. Connect Tee fitting to 36" hose.
5. Connect drinking water faucet supply hose to Tee fitting.
6. Connect adapter #1 to Tee fitting.
7. Connect  $\frac{1}{4}$ " tubing to adapter #1. Firmly press tube in fitting to seat fully.
8. Run tubing to back of refrigerator. Trim to length if necessary.
9. Connect adapter #2 to refrigerator (or other appliance) water inlet.
10. Connect  $\frac{1}{4}$ " tubing to adapter #2. Firmly press tube into fitting to seat fully.
11. Turn on cold water supply. Verify that there are no leaks.

**Note:** If installing the Ice Maker Kit at the same time as a new system or a new cartridge, you will need to purge air and fine particles left over from the manufacturing process. Before connecting  $\frac{1}{4}$ " tubing (D) to refrigerator run water through the drinking water faucet until the water runs clear. Have a container ready to catch any water from the tubing (D). This is only required at the first installation of the ice maker kit.

### Parts List for Ice Maker Kit - PN 700330

Item	Qty	Description
A	1	36" hose assembly
B	1	$\frac{3}{8}$ " Tee fitting
C	1	Adapter #1, $\frac{3}{8}$ " compression x $\frac{1}{4}$ " tube
D	1	15 ft of $\frac{1}{4}$ " tubing
E	1	Adapter #2, $\frac{1}{4}$ " compression x $\frac{1}{4}$ " tube
